

Neotech - SC-2000 MOTORIZED SURGEON'S CHAIR.

Product Description

In the last six years, we have carved a niche for ourselves as a leading manufacturer and supplier of Surgeon Chair. These chairs are used in medical institutions and hospitals. To manufacture the chairs we use optimum grade materials, sourced from the reputed vendors. We check the chairs on durability and quality parameters to provide a defect free range to the clients. Our Surgeon Chair is highly demanded and offered at the reasonable prices.

Features:

- Height adjustable
- Provided with castors
- Cushioned seat

Frequently Asked Questions:

1) What is a medical chair for?

Medical chairs are used in medical facilities to keep patients comfortable while recovering from illness or surgery or undergoing procedures, such as dialysis or chemotherapy. They are built to be durable, functional and low maintenance.

2) What are clinical seats called?

A Geri seat, otherwise called a geriatric seat or clinical chair, is an enormous, cushioned, open to leaning back seat with casters intended to permit patients recuperating from disease and medical procedure.

3) How does the seat of a medical procedure respond?

They oversee careful offices, complete administrative obligations, instruct learners, and help during medical procedures. Boss specialists additionally control monetary assets, lay out quality guidelines, and enroll new staff.
